

Name two features of the new bills that are designed to cut down on counterfeiting. Use details and examples from the text to support your answer. (Don't forget to interact with the text/question).

Two features on the new bills that are designed to cut down on counterfeiting are special color changing ink and the use of watermarking. To begin, special ink is used to prevent counterfeiting by allowing the bills to change colors when exposed to light. In the text it states "One of them is special ink that changes color when the light hits the money at different angles. To continue, watermarking is also a new feature. That was designed to cut down on counterfeiting. The same text also states, "The new bills also have watermarks, which are based on the same art as the portrait." To conclude, these are just several features that are incorporated on the new bills to prevent counterfeiting.
